

Center for Developing Minds

MIND LAB

Intensive Educational Therapy

Specialized support for students, age 13-20, who require immediate assistance with managing their schoolwork.

Experienced educational specialists will assist your family in the creation of a short- and long-term goals, partner with your student's teacher(s), and establish a plan for success.

Students of the Mind Lab will gain practical skills for addressing classwork challenges, as well as learn how to effectively prepare and navigate school. Participants will have a personal space to complete projects and homework, and our instructors will help engage with each student to regain lost motivation.

The Mind Lab will benefit families with soured parent-child relationships over homework struggles or students in academic crisis.

Registration is now open for upcoming sessions. Two or four days per week options available, fees start at \$450/week. Students are monitored in a small group environment over the duration of each two hour class, with a 15-minute individual pull-out with a master educational therapist. The intent of the Mind Lab is to teach students how to be productive learners, it is not a tutoring program for specific school subjects.

Please contact the clinic for an intake appointment to determine if the program is appropriate for your student. 408.358.1853
